

Magnetic beam line to transport a few MeV laser-produced protons in air for PIXE applications

CNR-INO
ISTITUTO NAZIONALE DI OTTICA
CONSIGLIO NAZIONALE DELLE RICERCHE

Fernando Brandi

**BLIN4 Workshop,
29/06/2020**

Presentation Lay-out

-) Introduction:

- 1) Particle induced X-ray emission (PIXE) with laser-accelerated particles
- 2) The LaserPIXE project

-) The 10 TW beam line Intense Laser Irradiation Laboratory

● -) Activities:

- 1) Pilot PIXE measurements in ambient air with laser driven source
- 2) Development of a compact magnetic beam line for few MeV protons

● -) Conclusions and Out-look

PIXE with laser-accelerated particles

PIXE is an Ion Beam Analysis technique to determine composition of near-surface layer(s) by characteristic X-ray emission using few MeV protons.

Motivation: few MeV protons can be efficiently generated by TNSA with \sim 10 TW laser allowing for compact PIXE apparatus.

Overview of PIXE related work with laser-accelerated particles:

-) PIXE *measurements* in vacuum from laser generated particles (protons+electrons)
[M. Barberio, S. Veltri, M. Scisciò & P. Antici, Scientific Reports, 7:40415, 2017]

-) *Simulation* of a beam line (quadrupoles+chicane) for PIXE with up to 20 MeV protons.
[M. Scisciò, M. Migliorati, L. Palumbo and P. Antici, Scientific Reports 8:6299, 2018]

-) *Simulation* PIXE experiments in *vacuum* with laser-accelerated protons
[M. Barberio and P. Antici, Scientific Reports 9:6855 2019]

-) *Simulation* PIXE experiments in *air* with laser-accelerated protons
[Passoni M, Fedeli L and Mirani F 2019 Sci. Rep. 9 9202]

-) *Simulation* experiment, highlighting the role of *laser-produced electrons* on PIXE signal
[M Passoni , FM Arioli, L Cialfi, D Dellasega , L Fedeli, A Formenti, AC Giovannelli, A Maffini , F Mirani , A Pazzaglia , A Tentori, D Vavassori, M Zavelani-Rossi and V Russo, 2020 Plasma Phys. Control. Fusion 62 014022]

The LaserPIXE project

LaserPIXE is a technology Transfer project, co-funded by UE, through Regione Toscana, and VCS S.r.l (Parma-Italy), a company expert in custom vacuum chambers and components.

Research Partners: LABEC Laboratory (INFN-Florence), Institute of Clinical Physiology (CNR, Pisa).

Goal: design a prototype proton laser-plasma accelerator (up to ~ 3 MeV) to perform PIXE measurements in **ambient air**.

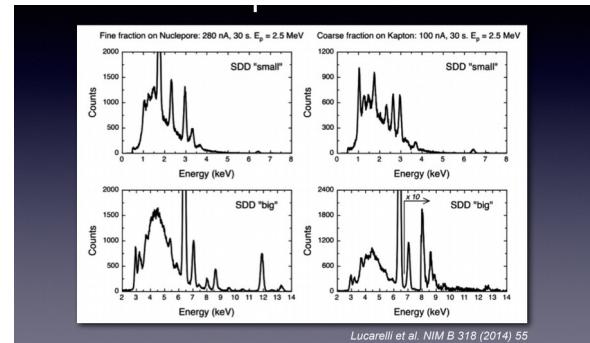

The LABEC laboratory in Florence

- ① Ion sources
- ② 3MV Tandetron
- ③ AMS line
- ④ External beam (cultural heritage)
- ⑤ Scattering chamber (IBA)
- ⑥ Scattering chamber (nucl. physics)
- ⑦ Pulsed beam
- ⑧ External microbeam
- ⑨ External beam (aerosol)

Conclusions

-) *Pilot experiments have shown the feasibility of PIXE in air with laser-generated particles*
-) *A compact magnetic beam-line has been developed and tested*

Out-look:

-) *dosimetry of the proton beam in air.*
-) *PIXE experiments with proton beam in air.*
